GLOBAL SALES PERFORMANCE ANALYSIS

Business Intelligence Report | Version 2.0

Prepared by:

Praisworth Lindokuhle Jonas

Report Date: July 2026

Data Coverage: January 2023 – June 2025

Dataset: 5,000 Transactions | 13 Markets | 5 Categories | 19 Products

Data Source: Kaggle (Public Dataset — used for analytical demonstration purposes)

1. Executive Summary

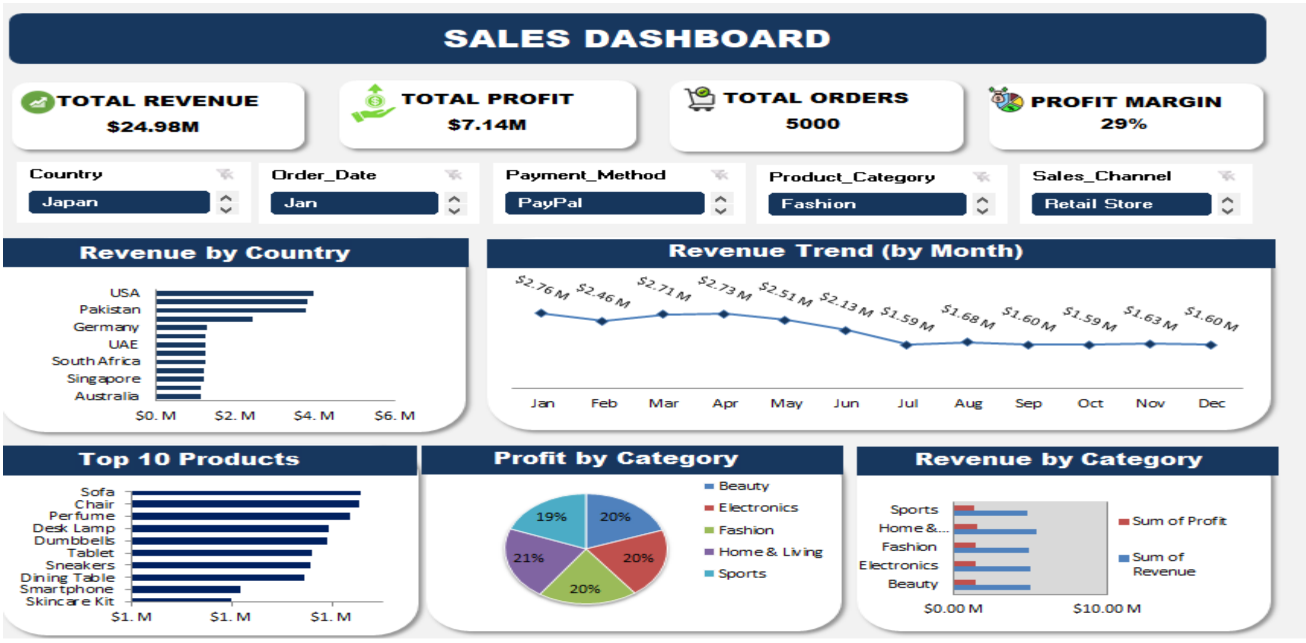
This report looks at global sales data across 13 countries, 5 product categories, 19 products, and 3 sales channels. It is based on 5,000 transactions recorded between January 2023 and June 2025. This is Version 2.0 — updated to include product-level analysis and a new monthly date filter on the Sales Dashboard.

Note: The data used in this report is a free public dataset from Kaggle. It is used here to demonstrate data analysis skills, not to represent a real business. All the analysis, charts, findings, and recommendations are original work by Praisworth Lindokuhle Jonas through OptiCore Systems.

$24.98M	$7.14M	5,000	28.6%
Total Revenue	Total Profit	Total Orders	Profit Margin
All Markets	*Gross Profit*	*Transactions*	*Avg. Rating: 3.0/5*

Here are the four most important things the data shows:

- Sales are much stronger in the first half of the year. January to June brings in 61% of all revenue ($15.3M), while July to December only brings in 39% ($9.7M). That drop in the second half is a real problem.
- Three countries — USA ($3.96M), India ($3.83M), and Pakistan ($3.78M) — make up nearly half of all revenue. Japan and Australia earn the least, even though they are among the wealthiest countries in the world.
- The Top 10 products all earn between $1.00M and $1.13M — the gap between them is tiny. Sneakers has the best profit margin at 29.5%. Home & Living products dominate the top spots.
- Customers give an average rating of 3.0 out of 5 across all channels. That is a warning sign — people at that score are unlikely to come back or recommend the business.



2. About This Report

The data used here comes from Kaggle, a free online platform where data analysts share public datasets for practice and learning. The dataset imagines a retail business that sells products across 13 countries through three channels: an Online store, physical Retail Stores, and a Mobile App.

This report was created by Praisworth Lindokuhle Jonas through OptiCore Systems to show what real data analytics work looks like — from cleaning raw data all the way through to building a dashboard and writing up the findings. Even though the data is simulated, everything else — the analysis, the thinking, and the recommendations — is done the same way it would be done for a real client.

This report answers five key questions:

- Which countries and sales channels are making the most money?
- Are there patterns in when sales go up or down during the year?
- Which products earn the most revenue and the best profit margins?
- Is performance spread evenly across all categories and channels?
- What are customers saying, and what does that mean for the business?

3. What the Data Shows

3.1 Three Countries Do Almost Half the Work

Even though this business sells in 13 countries, three of them — USA, India, and Pakistan — bring in nearly half of all the revenue. Together they account for $11.57M out of $24.98M total. The UK is the next strongest at $2.43M. Japan and Australia are at the bottom despite being two of the richest consumer markets in the world.

Country	Revenue	% of Total	Status
USA	$3.96M	15.9%	Top
India	$3.83M	15.3%	Top
Pakistan	$3.78M	15.1%	Top
UK	$2.43M	9.7%	Strong
Germany	$1.28M	5.1%	Mid
Turkey	$1.27M	5.1%	Mid
UAE	$1.26M	5.0%	Mid
Canada	$1.25M	5.0%	Mid
South Africa	$1.25M	5.0%	Mid
France	$1.22M	4.9%	Mid
Singapore	$1.22M	4.9%	Mid
Japan	$1.12M	4.5%	Underperforming
Australia	$1.12M	4.5%	Underperforming

What This Means

Japan and Australia are not performing well — but that is not because people there don't spend money. They are actually two of the highest-spending consumer markets in the world. The problem is likely that the business is not reaching them through the right channels or with the right marketing. This is fixable.

3.2 Sales Fall Off a Cliff in July

This is the biggest problem in the entire dataset. Revenue is strong from January to June, then drops sharply in July and stays low for the rest of the year. The drop from June ($2.13M) to July ($1.59M) is 25% in a single month. And it stays at that lower level all the way through December.

Month	Revenue	Share of Year	Change from January
January (Highest)	$2.76M	11.1%	Starting point
February	$2.46M	9.8%	-10.9%
March	$2.71M	10.8%	-1.8%
April	$2.73M	10.9%	-1.1%
May	$2.51M	10.0%	-9.1%
June	$2.13M	8.5%	-22.8%
July (Big Drop)	$1.59M	6.4%	-42.4%
August	$1.68M	6.7%	-39.1%
September	$1.60M	6.4%	-42.0%
October	$1.59M	6.4%	-42.4%
November	$1.63M	6.5%	-40.9%
December	$1.60M	6.4%	-42.0%

Why This Is a Risk

The first half of the year ($15.28M) earns 57% more than the second half ($9.70M). H2 runs at roughly 60% of what H1 earns every single month from July to November. If nothing is done about this, the same pattern will happen every year — and the business will always have a cash flow problem in the second half.

3.3 Top 10 Products Are Closely Matched — No Clear Winner

When you look at the top 10 products by revenue, they are all very close to each other. The #1 product (Sofa at $1.13M) earns only $130K more than the #10 product (Skincare Kit at $1.00M). That shows good balance across the product range — but it also means there is no single product that stands out as a clear growth driver.

Rank	Product	Category	Revenue	Profit	Margin	Orders
1	Sofa	Home & Living	$1.13M	$0.32M	28.7%	231
2	Chair	Home & Living	$1.13M	$0.32M	28.7%	207
3	Perfume	Beauty	$1.12M	$0.30M	27.0%	215

Rank	Product	Category	Revenue	Profit	Margin	Orders
4	Desk Lamp	Home & Living	$1.10M	$0.30M	27.7%	211
5	Dumbbells	Sports	$1.10M	$0.32M	28.9%	216
6	Tablet	Electronics	$1.08M	$0.32M	29.2%	222
7	Sneakers	Fashion	$1.08M	$0.32M	29.5%	205
8	Dining Table	Home & Living	$1.07M	$0.30M	28.2%	209
9	Smartphone	Electronics	$1.01M	$0.29M	28.7%	210
10	Skincare Kit	Beauty	$1.00M	$0.28M	28.1%	202

Margin Opportunity

Sneakers (29.5%) and Tablet (29.2%) make the most profit per rand sold — but they rank 7th and 6th on revenue. If the business focuses on selling more of these two products, it can improve overall profitability without needing to launch anything new. On the flip side, Perfume (27.0%) and Desk Lamp (27.7%) have the lowest margins — worth checking if their costs or discounts can be improved.

Home & Living stands out with four products in the Top 10: Sofa, Chair, Desk Lamp, and Dining Table — earning $4.43M combined. That makes it the most important category. But it also means the business depends heavily on one category. If there is ever a stock or supply problem in Home & Living, it will hurt the whole business.

3.4 Categories, Channels and Payment Methods Are Very Evenly Spread

One positive finding is that revenue is spread almost equally across all five product categories, all three sales channels, and all five payment methods. No single one dominates. This is healthy because it means the business is not over-relying on just one area.

Category	Revenue	Profit	Margin	% of Total
Home & Living	$5.35M	$1.52M	28.4%	21.4%
Electronics	$4.98M	$1.45M	29.2%	19.9%
Beauty	$4.96M	$1.39M	28.1%	19.8%
Fashion	$4.89M	$1.42M	29.0%	19.6%
Sports	$4.80M	$1.36M	28.4%	19.2%

Sales Channel	Revenue	Profit	Margin	% of Total
Online	$8.50M	$2.41M	28.4%	34.0%
Retail Store	$8.43M	$2.44M	28.9%	33.8%
Mobile App	$8.05M	$2.29M	28.5%	32.2%

Payment Method	Revenue	Orders	% of Orders
Credit Card	$5.25M	1,007	20.1%
Bank Transfer	$5.05M	1,011	20.2%

Payment Method	Revenue	Orders	% of Orders
Debit Card	$5.02M	1,010	20.2%
Cash on Delivery	$4.84M	977	19.5%
PayPal	$4.82M	995	19.9%

What This Means

The almost-equal split across all payment methods shows that the payment system works well for all types of customers. However, it also means no payment method is being used to reward loyal customers or encourage higher spending — which is an easy opportunity to explore.

3.5 Customer Ratings Are Too Low

Customers rate their experience an average of 3.0 out of 5 across all three channels. That score is the same whether they buy Online, in a Retail Store, or through the Mobile App. A 3.0 out of 5 is not a good score — it basically means customers are not impressed, and most of them are unlikely to come back or tell others about the business.

Why This Matters for Revenue

Studies show that keeping an existing customer is far cheaper than finding a new one. A customer who rates their experience 3/5 is unlikely to buy again. Even improving that average to 3.8/5 could lead to more repeat purchases and more word-of-mouth referrals — which directly increases revenue without extra marketing spend.

4. Final Thoughts

Overall, the data tells the story of a business that is in a solid position — $24.98M in revenue, a 28.6% profit margin, and a well-balanced mix of products, channels, and categories. But there are three clear problems that need attention: sales fall off sharply in the second half of the year, most of the revenue depends on just three countries, and customers are not satisfied enough to guarantee repeat business.

This updated version of the report also shows a new layer of detail at the product level. The Top 10 product analysis confirms that the portfolio is healthy and diverse, but also that the business does not yet have a standout product driving growth. Sneakers and Tablet are the best margin products and should be given more commercial attention.

Here is the recommended order of priorities:

- Right now (0–3 months): Start the second-half sales recovery plan and begin collecting better customer feedback.
- Short-term (3–6 months): Run targeted campaigns for Sneakers and Tablet, and review the cost structure for Perfume and Desk Lamp.
- Medium-term (6–9 months): Invest in Japan and Australia, and replicate what is working in the UK in Germany and France.

Appendix: Data & Dashboard Reference

About the Dataset

- Source: Kaggle — free public dataset (real_world_sales_dataset_5000)
- Purpose: Used for learning and demonstrating data analysis skills — not real business data
- Records: 5,000 transactions
- Date range: January 2023 – June 2025
- Countries: USA, India, Pakistan, UK, Turkey, Germany, UAE, Canada, South Africa, France, Singapore, Japan, Australia
- Sales Channels: Online, Retail Store, Mobile App
- Categories: Electronics, Home & Living, Fashion, Beauty, Sports (19 products in total)
- Payment Methods: Credit Card, Bank Transfer, Debit Card, Cash on Delivery, PayPal

All analysis, charts, findings, and recommendations in this report are original work by Praisworth Lindokuhle Jonas through OptiCore Systems.

Dashboard Summary — What Each Part Does

Dashboard Element	Type	What It Shows
Total Revenue KPI	Card	Overall revenue at a glance
Total Profit KPI	Card	How much profit was made
Total Orders KPI	Card	How many transactions were placed
Profit Margin KPI	Card	What percentage of revenue becomes profit
Revenue by Country	Bar Chart	Which countries earn the most
Revenue Trend by Month	Line Chart	How sales change across the year
Top 10 Products	Bar Chart	Best-selling products by revenue (NEW)
Profit by Category	Pie Chart	Each category's share of total profit
Revenue vs Profit by Category	Bar Chart	Side-by-side category comparison
Country Filter	Slicer	See data for one country at a time
Month Filter	Slicer	See data for a specific month (NEW)
Payment Method Filter	Slicer	Filter by how customers paid
Product Category Filter	Slicer	Focus on one product category
Sales Channel Filter	Slicer	Compare Online vs Retail vs Mobile App

Tools Used

- Raw data: Kaggle dataset — imported into Excel as-is
- Data cleaning and modelling: SQL and Microsoft Excel (SalesData sheet)
- Summaries and totals: PivotTables (Pivot Tables sheet)
- Key metrics: Calculated in the KPIs sheet using Excel formulas
- Dashboard: Built in Excel with charts and slicers
- This report: Written and formatted in Microsoft Word
